DATE OF PROCEDURE : 6/6/16

DATE OF DISCHARGE : 6/6/16

FINAL DIAGNOSIS :

Renal Calculus disease Lt HUN slp Lt Dyseur
CKD ESRD on

MHD

Erv sepsis

Lt lower lobe pneumonia

CLINICAL SUMMARY :

20/female, 16/10 CKD ESRD on MHD via Rt Erv presented with h/o fever, rigors, osteoporosis and pnc and on evaluation found to have pulmonary edema. H/o was done via Erv Rt but she developed Erv sepsis and Lt lower lobe pneumonia. Rt Erv was removed and treated with IV antibiotics, Lt Erv was placed for MHD. Pt had severe sepsis and recurrent episodes of pulmonary edema on regular H/o and on intensive care monitoring. Pt's general condition improved, but Pt had moderate renal dysfunction, hence A/P/S could not be done. At present in view of her overall medical condition, cardiologist and pulmonologist have given moderate risk for any surgical interventions.
